“Slickers Rotation”, Change Of Product Labeling

Ladies and Gentlemen, Dear Customer!

The “Slickers Rotation” for the test range from Ø 6mm to Ø 450mm, which has been developed and produced for more than 40 years, will exclusively be produced and sold by ourselves, the company, Slickers Technology GmbH & Co, KG, located in Geldern, Germany, under the new product label **“SliRo”**. This is effective immediately.

With the new product name we want to underline the focus of the company Slickers Technology as system supplier of complete solutions for high quality ultrasonic test lines. The renowned brand name within the market, “Slickers Rotation”, was distributed by the companies Nukem / Nutronik / GE under the product name “ROTA”. The exclusive right of use of this product name will remain with GE, but the company Slickers Technology will not supply any “Slickers Rotation” to GE. Future GE quotations containing a “ROTA” will not contain a “Slickers Rotation”.

You can recognize a “Slickers Rotation” by means of their digits/serial number stamped into the base at the front right. In case you need service or spare parts, even for older purchases via Nukem / Nutronik / GE you can turn directly to us or any of our agencies. In the context of this rebranding we simultaneously renamed our own ultrasonic electronics, “RotaEcho“, into **“SliRoEcho“**

Here will change only the brand name, as well. Our qualitatively premium electronics and the respective software will exclusively be distributed by ourselves and our agencies.

For further questions and requests please turn directly and trustfully to the company Slickers Technology.

Yours sincerely,

Helmut Ertner, Managing Director
